Master Guide: Digitizing Your Wardrobe and Building Outfits in Alta

This guide will walk you through the process of converting your clothes into a digital closet.

Document Map

In this guide, we will go over **four primary phases**:

1. **Phase 1: Signing in and Starting**, where you will add your personal information and preferences to create your own unique digital closet.
2. **Phase 2: Capturing and Digitizing Your Clothing Items**, where you will learn how to prepare and photograph your physical items within the app properly.
3. **Phase 3: Labeling and Verifying AI Data**, which keeps your clothing tagged with its characteristics for easy finding and organizing.
4. **Phase 4: Assembling and Saving a New Look**, which covers how to combine your digital items into an outfit combo.

***STILL DECIDING IF I DO A SIGN-UP PHASE**

Phase 1: Signing in and Starting

This software requires signing in to create your own personal experience and keep your progress and changes. We will quickly go through the simple steps to sign into your own account and set your preferences.

Step 1.1:

Step 1.2:

Step 1.3:

Step 1.4:

Phase 2: Capturing and Digitizing Your Clothing Items

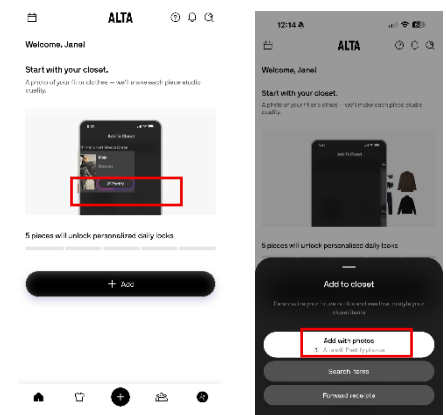

Before the Alta AI engine can recommend styles and outfits, you must build your digital closet with your real clothing items. This section covers both the physical and digital steps required to upload a clothing item.

Step 2.1: Prepare Your Garment Layout

Firstly, select a clear physical space to photograph your clothing so the AI can focus on the item and not background noise. (such as a plain floor, or bedsheet). For best results, ensure the room has good lighting without shadows so the AI can distinguish your item correctly. If this is not possible, do not worry, it will still work well. Lay your item out flat, or have it hung evenly on a hanger so that the entire item is visible.

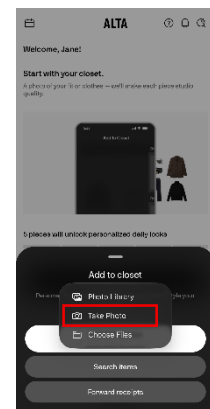

Step 2.2: Initialize Upload Screen

Second, open the Alta app on your device. Since you're just starting, it will display a visual with a button, **tap the "+ add" button**, and then **select "Add to closet"** from the pop-up menu.

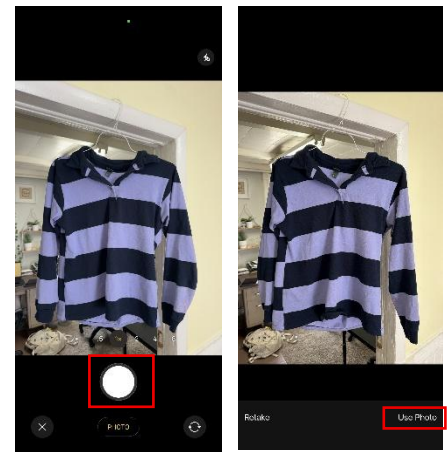

Step 2.3: Choose Your Image Source

Next, the application will ask you how you want to import your image. **Select "Take with photo"** if you are actively prepping the item right now, or select **"Photo library"** if you already have the pre-cropped pictures saved in your phone's camera roll.

Step 2.4: Execute Capture and Review Auto-Crop

Finally, place your camera in front of your item with a clear view of its entirety, and take the picture. It will display the photo you took with a bottom navigation to either **“Retake”** or **“Use Photo”**. Once you have taken a photo you like and have selected **“Use Photo”**, Alta will automatically process the image, applying its background-removal to “prettify” the item into a clean sticker. If the edges are jagged or the item has changed, you can **tap “Retry”** to regenerate the cropped image.

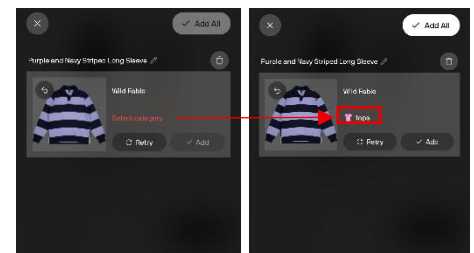

Phase 3: Verifying and Labeling AI Data

Once you take a photo, it needs to be tagged correctly so you can find it later. This section walks you through checking those labels.

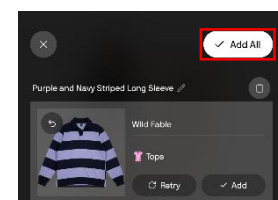

Step 3.1: Audit the Automated AI Suggestions

Firstly, look at the detail card generated by the app. The Alta AI will guess the brand, clothing category, and descriptive name of the item. Carefully **check it to ensure it is correct**. If not, tap into any individual field to manually type the true label if the AI misidentified a piece (e.g., classifying a top as a dress).

Step 3.2: Commit the Item to Your Closet

Next, once the descriptive tags match your item, look toward the upper-right corner of the screen. **Press the checked button that says “Add All”** to officially save your item to your unique digital closet.

Step 3.3: Build Out the Rest of Your Look

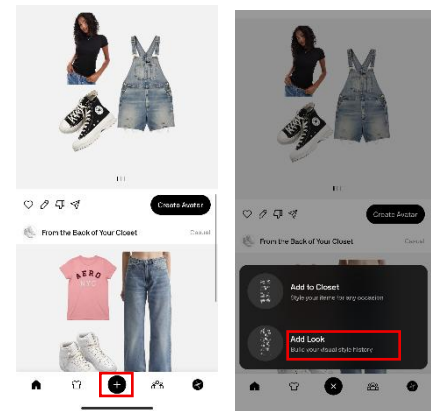

Finally, to build a complete outfit look later, you will need multiple items saved. **Repeat phases 2 and 3** for the next item (such as a pair of pants or shoes) if you wish to capture accompanying pieces.

Phase 4: Creating and Saving a New Look

Now that you have filled your own digital closet, you can mix and match to create new, fun looks and save them for future use.

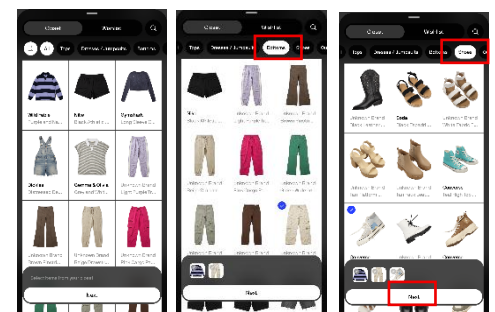

Step 4.1: Open the Outfit Creator

Firstly, look at the bottom homepage navigation again, and **tap the "+" add button** at the bottom of the viewport matrix, but this time, **tap "Add Look"** from the expanded options. If it does not appear, you have not added enough items to your closet yet to be able to create new looks.

Step 4.2: Batch-Select Your Clothes

Second, a grid containing all your digitized clothing items will appear. **Select the items you wish to create an outfit combo with.** If you are having trouble finding the items you need, you can filter your closet by category at the top of the screen (for example, tops, shoes, bottoms). Once a checkmark appears on all your target pieces, **select the "Next" button** located at the bottom of your screen.

Step 4.3: Inspect and Save Your Stylized Combination

Finally, review the newly generated composition on your screen. After it displays your outfit in a unified visual collage, **push the “Save” button in the top right corner** if you like it. If not, **select the back “<” button in the top left corner** to go back to the clothing items selection page to try again. (Step 4.2)

Notes:

I used AI to analyze my HTA diagram I made myself and help me make headings that sounded more professional for each step. Some of them sounded weird though, so I only kept the ones that made a better change and did the others myself.

I decided to both italicize and bold the transition word to show a pattern and distinguish them from bolded **actions**. I am not sure if that is a good idea or “too much”, so let me know your opinions on that.

I also realized - should I probably start with the sign-in process? Or is it ok to, as it is simple and most software has that? This guide can just be how to use it to add clothes and make outfits. Or is it better to keep the length having the sign-in process, adding clothes, attaching tags, and creating outfits ALL included in my how-to guide? Not sure if I am doing too many in that case?
